

Aajad Yadav

Full Stack Developer (React Native + Node.js)

Varanasi, Uttar Pradesh, India

aaadyadav038@gmail.com — +91 9565674990 — Portfolio — GitHub

Professional Summary

Full Stack Developer with hands-on experience building scalable mobile applications and backend systems using React Native and Node.js. Strong understanding of API design, authentication, state management, and system architecture. Experienced in developing production-grade applications with real-time features, AI integrations, and optimized performance.

Technical Skills

Languages: JavaScript, TypeScript, C, C++

Frontend: React Native, Expo, Tamagui

Backend: Node.js, Express.js, Nitro.js

Database: PostgreSQL, MongoDB, Supabase, Firestore

State Management: Redux Toolkit, React Query

Tools: Git, Docker, Postman, Prisma, Cloudinary

Core Concepts: REST APIs, Authentication (JWT/OTP), API Integration, State Management, Cross-Platform Development, System Design

Experience

React Native Developer, EPL Star Pvt. Ltd.

Jul 2025 – Oct 2025

- Developed cross-platform mobile applications using React Native and Tamagui with focus on performance and UI responsiveness
- Integrated RESTful APIs built with Node.js and Express.js, ensuring seamless frontend-backend communication
- Optimized application performance by reducing unnecessary re-renders and improving state handling
- Assisted in debugging, testing, and deployment workflows, improving application stability
- Collaborated with backend logic to ensure efficient data flow and API reliability

Projects

EchoNotes – AI Voice Note Application

Full-stack AI-powered productivity application for converting voice input into structured notes

- Developed a production-grade mobile app using React Native (Expo) and TypeScript
- Integrated Gemini AI via backend APIs to generate transcripts, key points, and action items from audio input
- Designed scalable architecture using Expo Router, Redux Toolkit (client state), and React Query (server state)
- Implemented offline-first data handling with local caching and background synchronization
- Built secure authentication system using Expo Secure Store with persistent session handling
- Optimized audio processing pipeline with multipart uploads and efficient media handling

AudioBee – Audiobook Streaming Platform

Full-stack audiobook application with streaming, authentication, and payment integration

- Built cross-platform mobile app using React Native and Expo with high-performance UI using Tamagui
- Developed backend using Nitro.js with Prisma ORM and PostgreSQL for scalable data handling
- Implemented secure authentication using Supabase and OTP verification via MSG91
- Integrated advanced audio playback with background support and progress tracking
- Designed REST APIs for content management, recommendations, and user library features
- Integrated Razorpay payment system for subscription and premium features

Lensly + Lensly API – Image Discovery Platform

Full-stack application for image exploration with search, wishlist, and user management

- Built mobile app using React Native and Expo with optimized UI and fast image loading
- Developed backend using Node.js, Express.js, Prisma, and PostgreSQL

- Implemented JWT-based authentication and secure user profile management
- Designed wishlist system with persistent storage and cross-device synchronization
- Applied event-driven architecture for handling background operations and workflows
- Enhanced API security using Helmet, CORS, and validation middleware

Shortly – URL Shortener API

Backend system for generating short URLs with analytics and authentication

- Built RESTful API using Node.js, Express.js, and MongoDB
- Implemented JWT-based authentication and protected routes
- Designed analytics system to track click history and user activity
- Generated unique short IDs using nanoid to avoid collisions
- Implemented secure password hashing and middleware-based authorization

Docker Management Application

Full-stack tool for remote Docker container management and monitoring

- Developed backend using Express.js to interact with Docker Engine API
- Implemented container lifecycle operations including start, stop, and restart
- Designed real-time monitoring system for container and image status
- Built mobile UI for managing containers remotely

Pantry Pal – Smart Pantry Management System

Mobile application for reducing food waste using intelligent inventory tracking

- Developed cross-platform app for tracking groceries and expiry dates
- Implemented automated alerts and real-time inventory monitoring
- Integrated AI-based recipe generation using available ingredients
- Designed intuitive UI for managing pantry items and updates

Education

Bachelor of Computer Applications (BCA)

Mahatma Gandhi Kashi Vidyapith (MGKVP), Varanasi

2022–2025
